

1st FIWARE CODE CAMP

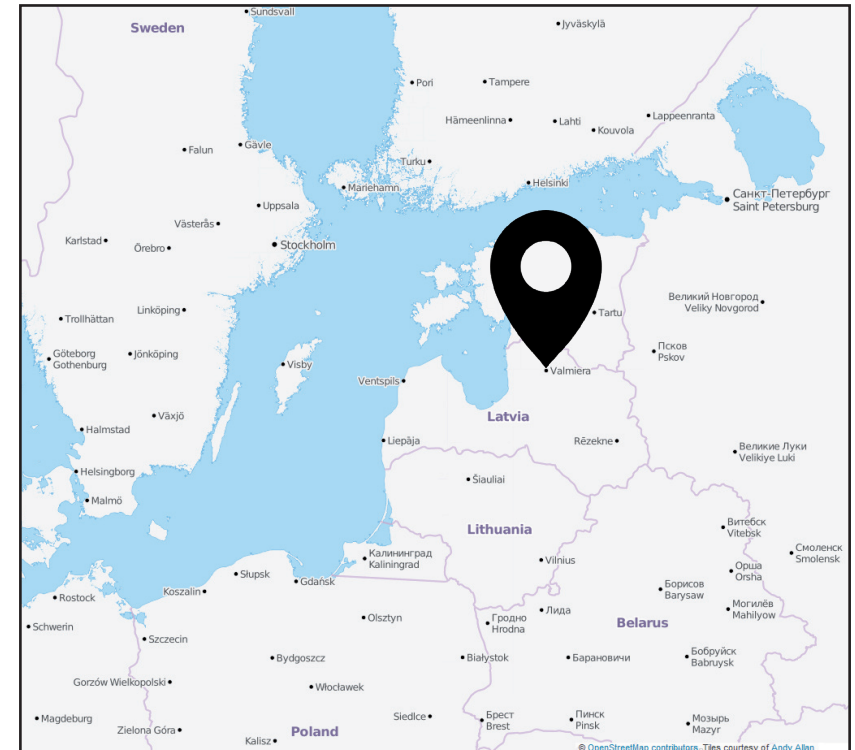

organised by the WirelessInfo FIWARE Reference Lab

The **WirelessInfo FIWARE Reference Lab** organises the 1st FIWARE Code Camp in Valmiera, Latvia. Next to traditional specialisms such as food industry, fibreglass production, metalworks and wood processing, Valmiera will host a group of developers which will collaborate on Internet of Things related technologies.

This activity supports the ongoing **SmartHoney** and **Imatop** projects under the **SmartAgriFood** accelerator (FI-PPP). The aim is also to come up with some good ideas to face the **FIWARE Challenges*** and to support the Open Sensor Network pilot in the **SDI4Apps project****.
